Colt Manual No. CM102

M16A1 RIFLE

ARMORER/DEPOT MAINTENANCE AND REPAIR MANUAL

REVISED JANUARY 1980

COLT®

WANNIMG$

WANNIMG: IF TNIS FIREARM IS CARELESSLY ON IMPROPERLY HANDLED, UNINTENTIONAL DISCNARGE COULD RESULT AND COULD CAUSE INJURY, DEATH, OR DAMAGE TO PROPERTY.

WARNIMG: IF THE BARREL IS VERY HOT FROM FIRING THERE IS A RISK OF COOK-OFF (i.e., A ROUND IN THE CHAMBER DISCNARGING BY ABSORBING NEAT FROM THE BARREL). A COOK-OFF CAN OCCUR ANY TIME AFTER CNAMBERING A RDUND IN A VERY HOT BARREL. WHEN THIS CONDITION IS SUSPECTED TNE CHAMBER MUST SE CLEARED IMMEDIATELY AFTER FIRING.

WANMING: DO NOT ATTEMPT TO FIRE IF WATER IS IN TNE BARREL FRDM FORDING, NEAVY RAIN OR THICK FOG. OPEN TNE BOLT AND ALLOW WATER TO DRAIN BEFORE FIRING. CLEAN A WET RIFLE AS SOON AS POSSIBLE.

FIVE BASIC SAPETY RULE$

1. **ALWAYS POINT A GUN IN A SAFE DIRECTION.**
2. **KEEP FIRE CONTROL SELECTOR ON SAFE UNTIL READY TO FIRE.**
3. **UNLOAD WHEN NOT IN USE.**
4. **ALWAYS ENSURE A GUN IS NOT LOADED BEFORE CLEANING OR DISMANTLING.**
5. **PRACTICE HANDLING AN EMPTY GUN BEFORE ATTEMPTING TO FIRE.**

CAUTION$ FON FINING

1. **WEAR EAR PROTECTION WNEN SNOOTING ON A RANOE TO REDUCE THE RISK OF CUMULATIVE LONG TERM PERMANENT NEARING LOSS.**
2. **SE SURE OF YOUR TARGET AND THE AREA BEHIND IT. WITHOUT AN ADEQUATE BACKSTOP, BULLETS MAY TRAVEL UP TO 3 MILES PAST OR THROUGN YOUR TARGET.**
3. **TAKE PRECAUTIONS TO AVOID ODNTAMINATION BY ACCUMULATIONS OF TOXIC GAS FUMES OR LEAD DUST WNERE FIREANMS ARE USED INDOURS OR WITHIN A CONFINED SPACE.**

CAUTIONS FON MAINTENAMCE

1. **ENSURE THAT MAGAZINE IS REMOVED AND THE RIFLE IS NOT LOADED BEFORE STRIPPING, CLEANING OR INSPECTING SO THAT IT WILL NOT FIRE.**
2. **WEAR SAFETY OLASSES IN CASE YOU LOSE CONTROL OF SDME SPRING LOADED COMPONENT WNICN COULD INJURE YOUR EYES.**
3. **DO HOT PERMIT LIVE AMMUNITION IN OR NEAR THE WORK AREA.**
4. **TAKE PRECAUTIONS WHEN NANDLING CLEANING FLUIDS AND LUBRICANTS. IF IN DOUBT SEEK ADVICE FROM THE MANUFACTURERS OF TNESE PRODUCTS.**

ASSOCIATED MANUAL

The scope of this manual, CM102 is outlined on page 1. For unit maintenance and operator's information and instructions on the 5.56 mm M16A1 Rifle, refer to Colt Manual CM101.

CHAPTER 1— INTRODUCTION

SECTION 1—GENERAL

1-1. Scope

This manual provides specific instructions for the inspection and maintenance of the 5.56mm Rifle, M16A1; Bipod, U S Model M3; bayonet knife, M7; and scabbard, M6A1 by armorer and depot shop personnel. The information and instructions provided are normally beyond the scope of tools and equipment available to the operator and/or his operational unit.

FIGURE 1-1. M16A1 RIFLE (RIGHT VIEW)

FIGURE 1-2. M16A1 RIFLE (LEFT VIEW)

1-2. Recommendations for Improvement of this Manual

User reports of errors or omissions and recommendations for improving this manual are encouraged. It is requested that such reports be submitted to:

Colt Industries
Firearms Division
150 Huyshope Avenue
Hartford, Connecticut 06102
U.S.A.

SECTION 2—DESCRIPTION AND DATA

1-3. General

Refer to Colt Manual No. CM101, Chapter I, Section 2, page 2, for a description of the rifle and additional information.

CHAPTER II—REPAIR AND MAINTENANCE INSTRUCTIONS

SECTION 1—REPAIR PARTS, SPECIAL TOOLS, AND EQUIPMENT

2-1. Repair Parts

2-1.1 Repair parts for operator and unit maintenance are listed in Colt Manual No. CM101, Appendix B, page 64.

2-1.1 Repair parts for armorer and depot maintenance are listed and illustrated in Appendix B, page 50 of this manual.

2-2. Special Tools and Equipment

The special tools and equipment required for the maintenance and repair operations described in this manual are listed in Tables 2-1 and 2-2, which follow, and in Appendix A, page 44 of this manual.

TABLE 2-1, ARMORER'S KIT, M16 & M16A1 RIFLE

TABLE 2-2, CONSUMABLE SUPPLIES REQUIREMENT

Item No.	Nomenclature	Quantity
1	Cleaner, Tobacco Pipe	AR
2	Cleaning Compound, Rifle Bore (U.S Federal Specification, P-C-111 or equivalent)	AR
3	Cleaning Compound, Solvent (U.S Specification MIL-C-372 or equivalent)	AR
4	Cloth, Abrasive Crocus Ferric Oxide and Quartz	AR
5	Grease, Molybdenum Disulfide (U.S. Specification MIL-G-21164 or equivalent)	AR
6	Lacquer Black (jet) Lusterless Acrylic Nitro-Cellulose type (touch up) (U.S. Federal Specification TT-L-50D, Type 1 or U S Specification MIL-L 19536; Color 37038)	AR
7	Lubricating Oil, Semi-Fluid (LSA), (U S. Specification MIL-L-46000)	AR
8	Lubricating Oil, Automatic Weapons (LAW) (U.S. Specification MIL-L-14107)	AR
9	Lubricating Oil, General Purpose Preservative (U S Federal Specification VV-L-800 or equivalent)	AR
10	Penetrating Oil (U.S. Federal Specification VV-P-216 or equivalent)	AR
11	Rag, Wiping, Cotton	AR
12	Sealing Compound, "Permatex No. 3D Aviation Form-A-Gasket" (Permatex Co., Brooklyn, N.Y.)	AR
13	Swab, Small Arms Cleaning	AR

AR = As Required

Note: The weapon is compatible with and will function properly using any good grade of oil and bore cleaner. The above formulations are recommended only because it is believed they are the best for all firearms, but equivalent materials would be acceptable

SECTION 2—TROUBLESHOOTING

2-3. General

Troubleshooting instructions are contained in Colt Manual No. CM101 Chapter III, Section 5, page 52.

SECTION 3—MAINTENANCE INSPECTIONS

2-4. General

This section provides specific instructions for inspection of material in the field or in maintenance shops. Troubleshooting information is incorporated wherever applicable as a normal phase of inspection.

2-5. Purpose of Inspection

Inspections are made for the purpose of (1) determining the condition of an item as to its serviceability, (2) recognizing conditions that would cause failure; (3) assuring proper application of maintenance policies at prescribed levels, and (4) determining the ability of a unit to accomplish its maintenance and supply missions.

2-6. Categories of Inspection

The categories of inspection performed by direct and general support maintenance personnel are listed in paragraphs 2-7 and 2-8 following. For inspection procedures, refer to Table 2-3, page 9.

2-7. Inspection of Material in the Field

This is the inspection of equipment to detect probable failure before unserviceability occurs; inspection to determine the availability and use of technical and supply manuals and lubrication instructions; inspection to determine the accuracy of records, authorized levels of equipment and supplies, practice of supply economy, preservation, and knowledge of the proper procedures for requisitioning supplies and equipment, and follow-up thereon.

2-8. Direct and General Support Inspection

2-8.1 Initial Inspection. This is an inspection of material received in maintenance shops for purposes of determining the degree of repairs and parts requirements. This includes determination of modification work orders to be applied.

2-8.2 In Process Inspections. These are inspections performed in the process of repairing the material, to insure that all parts conform to the prescribed repair standards, that the workmanship is in accordance with approved methods and procedures, and that deficiencies not disclosed by initial inspection are found and corrected.

2-8.3 Final Inspection. This is an acceptance inspection performed by a final inspector, after repairs have been completed, to insure that the material is acceptable for return to user or for return to replacement stock, according to established procedures.

2-9. Inspection Procedures

The inspection procedures for the rifle and bipod after disassembly are shown in Table 2-3, page 9, and specific instructions on inspection prior to disassembly are shown in paragraph 2-10 below.

CAUTIONS:

1. ENSURE THAT MAGAZINE IS REMOVED AND THE RIFLE IS NOT LOADED BEFORE STRIPPING, CLEANING OR INSPECTING SO THAT IT WILL NOT FIRE.

2. WEAR SAFETY GLASSES IN CASE YOU LOSE CONTROL OF SOME SPRING LOADED COMPONENT WHICH COULD INJURE YOUR EYES.

3. DO NOT PERMIT LIVE AMMUNITION IN OR NEAR THE WORK AREA.

2-10. Inspection Prior to Disassembly

NOTE: Check to see that the rifle and accessories have been cleaned of all grease, oil, dirt, or foreign matter which might interfere with proper functioning or obscure the true condition of the parts.

2-10.1 Make an overall inspection of the rifle and accessories for general appearance, condition and operation.

2-10.2 On material turned in for repair, make an initial inspection to determine the extent of repair required and the basis of procuring the parts or assemblies necessary to accomplish the repair.

2-10.3 Refer to Chapter V, page 34 for functional inspections.

TABLE 2-3—MAINTENANCE INSPECTIONS

Field Inspection	Direct and General Support Inspection		Action	Reference
Spot Check	Initial	In Process		
1. MAGAZINE ASSEMBLY				
X	X	—	A. Visually inspect magazine box for bulges, dents, cracks, bent cover lips, excessive wear, damaged feeder lips or bent or broken base plate retaining tabs.	
X	X	—	B. Check rear area of follower for chips or excessive wear which would impair functioning of the bolt catch.	
X	X	—	C. Examine springs for breaks, corrosion, or improper assembly to the follower.	
2. UPPER RECEIVER GROUP				
			A. General	
X	X	—	(1) Inspect for cracks or mutilation which would affect function. Small dents or gouges should not be cause for rejection	
X	X	—	(2) Inspect all parts for wear or damage	
X	X	X	(3) Check springs for breaks or deformations.	
			B. Handguard Assembly	
X	X	—	(1) Inspect for breaks and separation of handguard from liner.	

TABLE 2-3—MAINTENANCE INSPECTIONS (Cont.)

Field Inspection	Direct and General Support Inspection		Action	Reference
Spot Check	Initial	In Process		
X	X	—	(2) Inspect for dents, cracks, or chipping that would impair the functioning of components or the weapon.	
			C. Barrel and Barrel Extension	
X	X	—	(1) Inspect surfaces for cracks or other defects.	
X	X	—	(2) Check barrel extension for burrs, or broken or worn locking lugs.	
X	X	—	(3) Check bore for cleanliness and freedom from corrosion.	
X	X	—	(4) Individual pits as large in diameter as a land or groove width are allowable in the bore only. Uniformly fine pits are acceptable in the bore	
X	X	—	(5) When viewed with the naked eye, lands that appear dark due to coating of gilding metal from projectiles are allowable	
X	X	—	(6) Definitely ringed bores or bores ringed sufficiently to bulge the outside surface of the barrel are cause for rejection	

TABLE 2-3—MAINTENANCE INSPECTIONS (Cont.)

Field Inspection	Direct and General Support Inspection		Action	Reference
Spot Check	Initial	In Process		
X	X	—	(7) Inspect for barrel erosion. A borescope or cystoscope will greatly assist in this inspection. Appreciable erosion can exist and the rifle may still target satisfactorily. Target group size obtained by test firing should be the final criterion used to judge the acceptability of the barrel. The maximum permissible group size should be established by the user.	
X	X	—	(8) Inspect chamber for cleanliness and freedom from carbon deposits and corrosion.	Figure 2-3, page 17
X	X	—	(10) Inspect chamber for pitting using chamber reflecting tool, p/n 62694. Position tool in chamber as shown in Figure 2-3. Slowly rotate the upper receiver so that the reflected light will illuminate the chamber walls. A pit or pits as large as 1/32 inch (0.794 mm) in diamter shall be cause for rejection. A small number of uniformly fine pits, (approximately .010 in. (0.254 mm diamter) shall be acceptable provided that cartridges fired in the weapon do not exhibit cases with unusual or noticeable deformation or marking of the case body or excessive offset of the extractor groove flange.	Figure 2-3, page 17

TABLE 2-3—MAINTENANCE INSPECTIONS (Cont.)

Field Inspection	Direct and General Support Inspection		Action	Reference
Spot Check	Initial	In Process		
X	X	X	(11) Check headspace, using Headspace Gage T-27921.	Figure 2-2, page 16
X	X	—	D. Front Sight and Gas Tube	
X	X	—	(1) Check front sight for cracks and general condition.	
X	X	—	(2) Check front sight post and detent for rust or other deficiencies which could cause restricted movement.	
X	X	—	(3) Check gas tube for cracks, deformities, or eccentric wear at rear tip.	
X	X	—	E. Ejection Port Cover Assembly	
X	X		(1) Check for bent, twisted or dented cover.	
X	X	X	(2) Check detent, and C ring for breakage or corrosion.	
X	X	X	(3) Check for broken, or distorted cover spring.	
X	X	—	F. Forward Assist. Check for corrosion and free function.	
X	X	—	G. Rear Sight. Check for broken or corroded windage drum and for corrosion between sight leaf and receiver	
3. BOLT CARRIER GROUP				
X	X	—	A. Check for cracks or deformities in bolt (cam pin hole area).	
X	X	—	B. Inspect bolt for pitted or chipped bolt face, elongated firing pin hole, or corroded ejector.	

TABLE 2-3—MAINTENANCE INSPECTIONS (Cont.)

Field Inspection	Direct and General Support Inspection		Action	Reference
Spot Check	Initial	In Process		
X	X	X	C. Each bolt locking lug should be inspected periodically for cracks. Use a black light if available, otherwise use a glass of no more than 3X magnification. Particular attention must be given to the lugs adjacent to the extractor slot, particularly where the rear shoulder of the lug meets the bolt body. Bolt with lugs exhibiting cracking, or which are definitely suspect, will be replaced.	
X	X	X	D. Inspect for broken bolt rings and proper spacing in ring gaps. Ring gaps are to be staggered to prevent loss of gas pressure. Check effectiveness of rings as follows: With firing pin and cam pin removed, and bolt assembled to bolt carrier, hold carrier vertically with key pointing downward. Bolt should not drop out of carrier; if bolt drops out, replace bolt rings.	
X	X	—	E. Inspect firing pin for wear and burrs.	
X	X	X	F. Check firing pin protrusion, using gage 62879. Protrusion should be between 0.028 & 0.036 in. (0.711 mm-0.914 mm).	Figure 2-4, page 17
X	X	—	G. Check key and bolt carrier assembly for cracks, burrs, chips, rust, or blockage of the key bore and gas passages, and for a bent or dented carrier key.	

TABLE 2-3—MAINTENANCE INSPECTIONS (Cont.)

Field Inspection	Direct and General Support Inspection		Action	Reference
Spot Check	Initial	In Process		
X	X	X	H. Check socket head cap screws. They must be properly tightened and staked. Check for evidence of gas leakage between carrier and key.	Figure 6-2, page 39
X	X	X	I. Inspect extractor assembly for cracks in the claw areas, elongated pivot holes, a bent or broken extractor spring, and damaged or missing rubber plug.	
X	X	X	J. Check for broken extractor pivot pin.	
4. LOWER RECEIVER GROUP				
			A. General	
X	X	—	(1) Inspect for cracks, corrosion or mutilation which would affect functioning. Small dents or gouges will not be cause for rejection. Corroded areas should be noted for immediate repair.	
X	X	—	(2) Inspect all parts for wear and damage.	
X	X	X	(3) Check springs for breaks or deformation.	
—	X	X	(4) Check trigger pull, minimum 5.5 lb., maximum 8.5 lb (2.49 kg-3.86 kg).	
			B. Stock Assembly	
X	X	—	(1) Inspect for breaks and separations of material which prevent proper retention or interference with proper functioning of weapon.	

TABLE 2-3—MAINTENANCE INSPECTIONS (Cont.)

Field Inspection	Direct and General Support Inspection		Action	Reference
Spot Check	Initial	In Process		
X	X	—	(2) Inspect for dents, cracks and chipping that would impair the functioning of components or weapon.	
5 BIPOD AND CASE				
X	X	—	A. Inspect the bipod legs; they shall move freely from closed to open position under spring tension. Inspect for rust and shiny areas. Any found must be touched-up.	
X	X	—	B. Bipod must hold securely to the rifle.	
X	X		C. Check case for holes or torn stitches	
6. BAYONET AND SCABBARD				
X	X	—	A. Inspect bayonet for chipped or broken grips, missing grip screws, bent, rusted, or missing latches. Latches must open and close freely and bayonet must hold securely to carbine.	
X	X	—	B. Inspect scabbard for missing rivets, torn webbing, broken or cracked body and torn or missing lace. Check that snap fastener holds firmly.

FIGURE 2-4. FIRING PIN PROTRUSION CHECK

A. FIRING PIN PROTRUSION GAGE (P/N 62879)

B. FIRING PIN PROTRUSION CHECK

NOTE: With the firing pin held firmly forward in the bolt, the end of the firing pin protrusion gage marked "MAX" ("GO"—.036 in, 0.91 mm) should pass over the end of the pin (See Figure 2-4) without touching it, and the end marked "MIN" ("NO-GO"—.028 in, 0.71 mm) should hit the end of the firing pin and not pass over it.

CHAPTER III—REPAIR INSTRUCTIONS

3-1. General

A. This section contains repair instructions and authorized direct and general support maintenance in the removal, disassembly, cleaning, inspection, lubrication, repair, and assembly of major groups and assemblies for the M16A1 Rifle and its accessories.

B. Refer to Table 3-1, page 19, for guide to maintenance functions.

C. Disassemble in accordance with the instructions contained in Colt Manual No. CM101, page 31, and Figures 3-1, through 3-3, pages 20-28 of this manual

3-2. Replacement of parts

Replace all parts that are worn, damaged, cracked or broken. All replacement parts are interchangeable and require no adjustments at installation. However, to insure proper function and reliability, the following precautions should be taken:

3-2.1 Do not interchange bolts and bolt carriers unless replacement is necessary. Keep the bolt with the original bolt carrier

3-2.2 If replacement of either part becomes necessary, carefully check the new part to see that it fits properly, operates smoothly, and that the proper head space is provided (See Figure 2-2, page 16).

3-2.3 If one or more rings of the bolt assembly are damaged, replace the three rings as a set.

3-2.4 When assembling a bolt with new rings into the bolt carrier, rotate the bolt while pushing it into the carrier to prevent damaging the rings. Move the bolt in and out several times to seat the rings.

3-2.5 If the bolt carrier key is replaced, it may be necessary to create a seal between the bolt carrier and key by firing 5 to 8 rounds. (Manual operation of the rifle may be required.) Sealing compound (Table 2-2, item 12, page 5.) may also be required prior to assembly of the key and bolt carrier. (See Chapter VI, paragraph 6-2.1.4 page 39.)

3-2.6 See page 31 for installation of replacement barrel and front sight assembly.

Bipod	Par 4-8 P60		Par 4-4,P60	Par 4-8 P60					

NOTE Weapons returned to direct maintenance because of jammed pivot pin detents and springs should be repaired as follows:

A. Place forward portion of lower receiver in a container of penetrating oil, rifle bore cleaner or carbon removing compound (cleaning solvent) and allow to soak for 24 hours.

B. Remove the pivot pin, detent, and spring using a small piece of wire.

C. After removal of parts thoroughly clean the recess and parts and lubricate with LSA oil before assembly.

A. REMOVE BOTTOM PLATE

B. REMOVE SPRING

C. REMOVE FOLLOWER

3-3. Cleaning and Lubrication

Clean and lubricate the material as instructed in Colt Manual No. CM101, paragraphs 3-5, page 31. Also comply with the additional instructions in Table 3-2 below.

TABLE 3-2—CLEANING AND LUBRICATION

Item	Action Required
Barrel	If hard carbon is still evident in the chamber after cleaning, dip soak chamber and reclean. Dry thoroughly with swabs.
Barrel Nut Assembly	A. Remove all evidence of dirt or rust. B. Prior to assembly, apply a coating of LSA oil to components of barrel nut assembly with the exception of the barrel nut threads which should be coated with molybdenum disulfide grease
Front Sight Assembly	Apply a generous coat of LSA oil to the front sight post, detent, and spring prior to assembly
Gas Tube	Remove carbon deposits from the exterior surface of the tube **IMPORTANT:** Do not use any type of abrasive material to clean the gas tube. A .063 in (1.60 mm) to .076 in. (1.93 mm) diameter spring wire may be used to dislodge deposits inside the tube.
Upper Receiver Group	A. Apply a generous coat of LSA oil to all internal surfaces and a light coat to all external surfaces prior to assembly. **IMPORTANT:** Do not use a wire brush on aluminum surfaces such as the receivers. B. Prior to assembly, thoroughly lubricate the ejection port cover, and all components of the forward assist and front sight assemblies with LSA oil. **NOTE:** The ejection port cover latch shall not be disassembled. If the latch is inoperative, the ejection port cover assembly must be replaced.

TABLE 3-2—CLEANING AND LUBRICATION (CONT.)

Item	Action Required
Bolt Carrier Group	A. Clean the extractor recess in the bolt. B. Clean the gas exhaust ports in the bolt carrier with a hand-held No. 36 drill (.106 in, 2.69 mm).
Lower Receiver Group	A. Prior to assembly, apply a generous coat of LSA oil to all functional parts. B. Lubricate the threads of the lower receiver extension with a coat of molybdenum disulfide grease. **NOTE:** Dry cleaning solvent may be used to clean or wash grease or oil from all parts of rifle and bipod.
General	Component parts which contain a hard carbon, such as the flash suppressor, barrel bore, bolt carrier group, will require special cleaning using carbon removing compound. **CAUTION: FOLLOW SAFETY PRECAUTIONS FOR HANDLING CARBON REMOVING COMPOUND TO PREVENT SKIN OR EYE DAMAGE.** A. Fill a suitable container with fresh compound. B. Remove all grease, dirt and oil before soaking components in compound. Completely immerse parts to be cleaned in compound. C. Soak for 2 to 16 hours. Remove parts and allow to drain. Rinse in dry cleaning solvent. Brush with a stiff bristle brush under running water to effectively remove carbon.

Table 3-3 INSTALLING A REPLACEMENT BARREL AND

FRONT SIGHT ASSEMBLY

When installing a replacement barrel and from sight assembly, part no 62744, note that it includes the barrel, front sight assembly, barrel nut and cap handguard See item no. 6 on Figure B-1, page 52 for illustration of components

Step	Action	Reference
1	CLEAR RIFLE	
2	Disassemble by separating receivers and removing bolt carrier assembly and charging handle.	CM101, Par 3-4, page 31, steps A, B and C
3	Remove flash suppressor and lock washer and retain for assembly on new barrel.	CM102, Fig. 3-2, page 21, steps C and D
4	Remove gas tube roll pin.	CM102, Ch III, Fig. 3-2, page 22, step J
5	Remove gas tube by pushing it back through barrel nut until front end is clear of front sight assembly and cap handguard Then, pull gas tube clear and forward out of the barrel nut. Retain gas tube for assembly to new barrel and ensure that it is not bent or dented.	
6	Remove barrel nut and barrel from upper receiver.	CM102, Ch. III, Fig. 3-2, page 22 and 23, steps P, Q, and R
	When assembling barrel and barrel nut to receiver use the barrel nut aligning tool which must be installed in the carrier key	CM102, Ch. IV, Fig. 6-1, page 36, steps A, B and C
7	Disassemble barrel nut components leaving barrel nut on barrel. Retain snap ring, handguard, slip ring, handguard, and spring for new barrel nut.	CM102, Ch. III, Fig. 3-2, page 23, steps S and T
8	Install replacement barrel and front sight assembly, and reassemble rifle by following this procedure in reverse order and the instructions given for installing a barrel.	CM102, Ch. IV, par. 6-2.1 2 page 37

CHAPTER IV—MATERIAL USED IN CONJUNCTION WITH MAJOR ITEM

4-1. General

The Bayonet-Knife, U S Model M7, and Bayonet-Knife Scabbard, U.S. Model M8A1, are used in conjunction with the major item. Refer to Manual CM101 for operator and organization maintenance instructions.

4-2. Direct and General Support Maintenance

4-2.1 Disassembly.

Refer to Figure 4-1, page 33.

NOTE: Prior to disassembly, it is recommended that the right hand release and plate be marked to assist in identification when assembling the left and right hand releases (See Figure 4-1, page 33).

4-2.2 Cleaning.

Refer to Manual CM101, page 31

4-2.3 Inspection and Repair

4-2.3.1. Bayonet-Knife

(a). Replace screws, if threads are stripped.
(b). Replace cracked grips.
(c) Replace spring pin if worn or damaged
(d) Replace spring if kinked, set, or broken.
(e). Remove nicks and dents, as required by grinding and/or stoning.
(f). If wear is noted on the release camming area and positive retention to the rifle is questionable, replace as required. If binding is noted due to a bent release, repair by straightening or replace release
(g) Use flat black lacquer if shiny surfaces are on handle of blade.

4-2.3.2. Bayonet-Knife Scabbard, U.S. Model M8A1.

(a). Metal parts will be dark. If the finish of metal is worn, flat black lacquer may be applied.
(b) If the scabbard is chipped, exposing the fabric or the surface is scratched or marred, smooth as required and paint with olive drab lusterless enamel.
(c). Clean and/or replace broken or damaged lace

FIGURE 4-1. BAYONET-KNIFE DISASSEMBLY

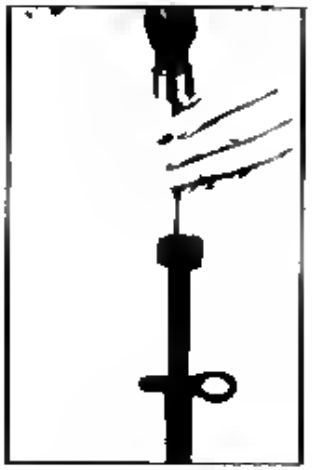
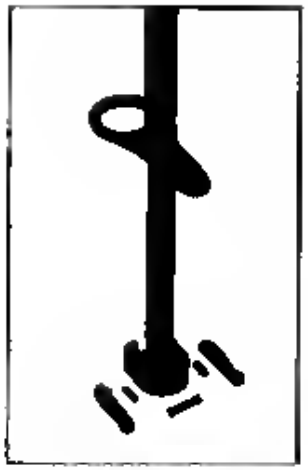
B. GRIPS REMOVED



C. RELEASE DISASSEMBLY



D. RELEASE DISASSEMBLED

4-2.4 Assembly.
Assemble by reversing procedure in Figure 4-1.

CHAPTER V—FINAL INSPECTION

5-1. General

This chapter contains instructions for the final inspection of repaired rifles and bipods. As applicable, the rifles and bipods must be checked in accordance with the procedures outlined in Table 2-3, page 9, and in paragraphs 5-1.1 through 5-1.3 which follow. Rifles that have been repaired shall be function fired to assure proper function. Rifles that have been rebarreled should be both function fired and fired for accuracy.

5-1.1 Visual Inspection

Overall appearance shall be approximately that of a new weapon. All exposed metal surfaces are to have a dull, rust or corrosion resistant finish with no burrs or deep scratches. Barrels must be straight, clean, free of rust, powder fouling, large pits, bulges, or rings. Fine pitting is allowable. Rifles must be complete with no missing parts. The serial numbers must be legible. All steel parts must be free of rust. Roll pins must be secure and screws must be tight. Check to be sure that all modifications authorized to date have been incorporated.

5-1.2 Functional Inspection

The instructions for accomplishing a functional inspection are contained in Colt Manual No. CM101, Chapter II, Section 5, page 25.

5-1.3 Inspection of Critical Dimensions

Inspect for dimensional acceptability of headspace, firing pin protrusion, barrel straightness, and extent of barrel erosion in accordance with the instructions contained in Table 2-3, page 9.

CHAPTER VI—REPAIR, REFINISHING, AND REASSEMBLY

6-1. Repair and Refinish Procedures

Approved procedures for repair and refinishing of various surfaces of the rifle are as follows:

6-1.1 Repair Procedures

The recommended repair procedures are by the application of touch-up coatings and/or replacement of parts.

NOTE: Stoning in accordance with standard shop procedures is permitted in non-critical areas for removal of minor burrs, nicks, or slight surface imperfections. **Extreme care must be exercised** to preclude alteration of critical characteristics. Touch-up of the stoned surface should be done as soon as possible after stoning or other abrasive procedures to prevent contamination or corrosion of the exposed surface

6-1.1.1 Dents and Gouges

(A) **Smooth** the periphery of the defect by filing, scraping, sanding, buffing, or other appropriate means to improve the appearance and to establish a clean, firm contact area for the touch-up material.

(B) **Wash** the area with solvent cleaning compound (Table 2-2, item 3, page 5) to remove all dust, grease, or other foreign particles.

(C) **Dry** the surface, **apply** the touch-up finish, and **cure** it in accordance with the instructions furnished by the manufacturer. The lacquer in Table 2-2, item 6 page 5 should be used on all exposed, exterior surfaces of aluminum parts. The touch-up lacquer may also be used on clean steel surfaces which are exposed and are not subjected to heat.

6-1.1.2 Corroded Components

Corroded components, particularly the upper and lower receiver extension, may be repaired when removal of the corrosion is possible by light sanding or buffing operations which will return the affected surface to a smooth condition for touch-up. Affected area shall be cleaned and refinished as specified in paragraph 6-1.1.1 above.

6-1.2 Corrective Action for Unusual Malfunctions

Cartridge Case Rim Shear

If the case cannot be removed from the chamber by the standard procedure (actuation of the bolt assembly), a cleaning rod may be inserted into the muzzle and the case may be pushed out of the chamber. If the chamber is found to be pitted, replace the barrel and front sight assembly.

6-2. Reassembly

Reassembly of the major groups shall include all necessary adjustments, specified torque applications (as indicated, using properly calibrated and maintained equipment), and a constant quality assurance surveillance to insure that included parts, components, subassemblies, and/or assemblies conform to all criteria as specified in this manual. Torque wrenches listed in Table 2-1, page 3, shall not be considered as mandatory. However, the wrenches listed, with their inherent functional characteristics should fully satisfy all requirements contained in this manual. When installing the various roll pins, the ¼ in. punch (p/n 94156) shall be used in all cases in order to avoid damaging the pins or driving them in too far.

NOTE: LSA oil or equivalent shall be applied to all moving contact surfaces during reassembly. Emphasis is directed to all coil springs, particularly detent springs, and associated detents, plungers, and/or retainers. The fire control selector must also be lubricated at assembly.

The material shall be reassembled as specified in the following paragraphs.

6-2.1. Upper Receiver Group

The upper receiver group shall be reassembled by reversing the disassembly procedure and in accordance with the following instructions.

6-2.1.1 Front Sight.

Visually align front sight taper pin holes before installation of new taper pins. Install pins from right side with uniform application of force, using punch, p/n 62682. Support the front sight on a block of wood. Force applied shall not cause larger end of taper pin to enter to the point of being flush with sight frame surface. However, leading or small end of taper pin shall be flush or above sight frame surface after application of above force.

6-2.1.2 Barrel.

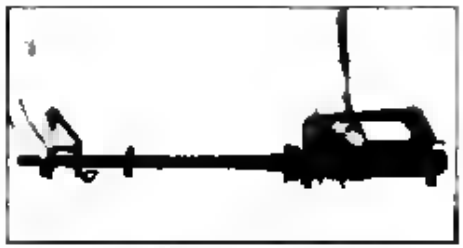
During installation of barrel assembly into the upper receiver, extreme care must be exercised to preclude damage to the upper receiver alignment slot by the barrel assembly alignment pin. Pin must enter slot, without deformation of the slot walls, to the depth necessary to accomplish full contact between the barrel assembly collar and the receiver. The threads of the barrel nut and the receiver shall be coated with molybdenum disulfide grease, page 5, item 5, prior to assembly. Initial torque applied to the barrel nut shall be 30 ft lbs (4.15 kg m) using torque limiting wrench, p/n 94162, and the combination wrench, p/n 62696, and with the barrel held in the barrel removal vise jaws, p/n 62695, in a bench vise. (See Figure 6-1B.) Additional torque shall be applied as necessary to create clearance for free entry of the gas tube through the barrel nut, using the barrel nut alignment tool, p/n 62693, as shown in Figure 6-1A and C.

FIGURE 6-1 BARREL NUT AND GAS TUBE/FRONT SIGHT ASSEMBLY INSTALLATION

A. BARREL NUT TORQUING *

B. BARREL NUT ALIGNMENT TOOL (P/N 62693) INSTALLED IN KEY

C. BARREL NUT INSTALLED AND ALIGNED.



D. GAS TUBE AND FRONT SIGHT ASSEMBLY INSTALLED.

*NOTE: MAKE CERTAIN ALL THREE PINS OF THE COMBINATION WRENCH ARE FULLY ENGAGED WITH THE BARREL NUT.

6-2.1.3 Flash Suppressor

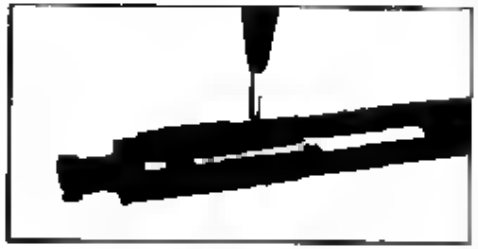
Install the flash suppressor and lock washer with a torque of 25-30 ft lbs (4.15-5 53 kg m), using the combination wrench (P/n 62696) and the torque limiting wrench (p/n 94162), with the barrel held in the barrel removal vise jaws (p/n 62695) in a bench vise

6-2.1.4 Bolt Carrier Group

See Colt Manual CM101, page 33, for assembly instruction When installing the bolt carrier key, apply a thin coat of sealing compound (Table 2-2, item 12, page 5) to the undersurface of the key, being careful not to plug the gas port. Tighten the two socket head cap screws to a torque of 35-40 in lbs (0 40-0.46 kg m) using the torque limiting wrench (p/n 94161) and the socket head hex bit wrench socket (p/n 94158) as shown in Figure 6-2a The two socket head screws shall then be staked to the key at two points using the center punch (p/n 94146) as shown in Figure 6-2b below.

FIGURE 6-2. BOLT CARRIER KEY INSTALLATION

A. TORQUING KEY SCREWS (35-40 IN. LBS.)

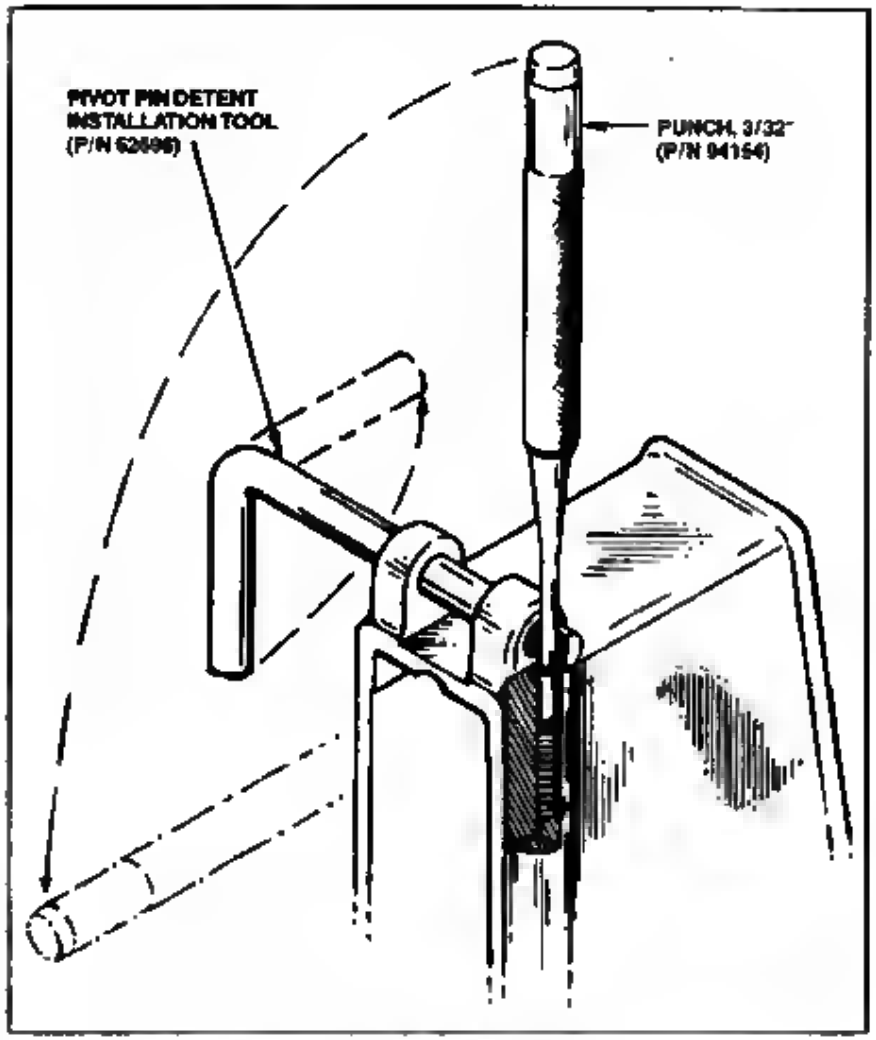


B STAKING KEY SCREWS.

6-2.1.5 Lower Receiver Group

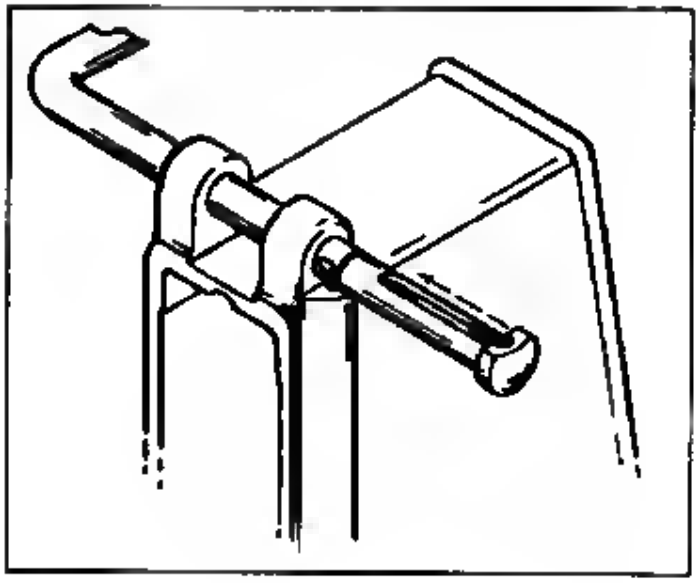
See Colt Manual No. CM 101, page 50, for assembly instructions which are not included in this manual. Refer to Figure 6-3, page 41, for installation of the pivot pin detent and spring using the pivot pin detent installation tool Particular care should be exercised during installation of the hammer assembly to insure thet the ends of the hammer spring are resting on the upper surface of the trigger pin as the hammer spring acts as a retainer for the trigger pin (See Figure 6-4, page 42) (See Figure 6-5 for receiver extension and buttstock installation.)

FIGURE 6-3. PIVOT PIN DETENT INSTALLATION



A. DETENT AND DETENT SPRING INSTALLATION.

FIGURE 6-3. PIVOT PIN DETENT INSTALLATION (CONT)



B. PIVOT PIN INSTALLATION

Step	Action
A.	Insert the pivot pin detent installation tool (p/n 62698) in the pivot pin holes of the lower receiver as shown in Figure 6-3A.
B.	Slide the installation tool in sufficiently to locate its hole directly over the detent cavity
C.	Insert detent spring and detent through the hole in the installation tool and into the detent cavity
D.	Press the detent into the cavity with the 3/32 in. punch (p/n 94154) but stop the punch just at the top of the cavity.
E.	Rotate the installation tool and punch 90°.
F.	Hold the pivot pin firmly against the installation tool and push the installation tool out as shown in Figure 6-3B.
G.	Rotate the pivot pin until the pivot pin drops into the pivot pin detent groove.

FIGURE 6-4. HAMMER SPRING AND TRIGGER PIN INSTALLATION

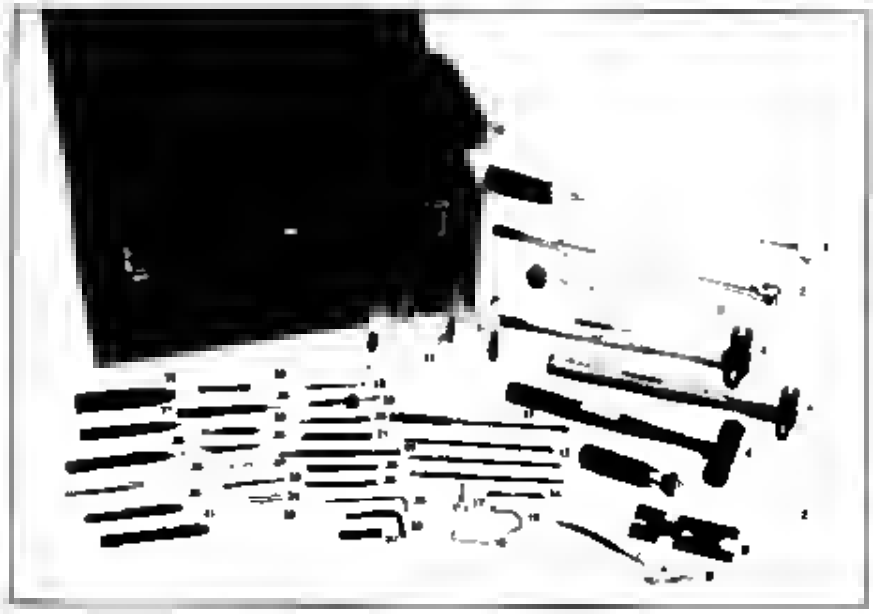
FIGURE C-1—ARMORER'S KIT PT. NO. 62575



COLT's ARMORER'S KIT CONTAINS THE NECESSARY TOOLS FOR INSPECTION, MAINTENANCE AND REPAIR OF THE M16 & M16A1 AUTOMATIC RIFLE. THE KIT IS INTENDED FOR USE BY THE ARMORER AND DEPOT PERSONNEL.

MAINTENANCE AND REPAIR ON THE MODEL M-3 BIPOD AND THE MODEL M-7 BAYONET CAN ALSO BE PERFORMED WITH THIS KIT.

	Part No.	Description
1	94162	Wrench, Torque-Limiting, ½" Sq. Drive
2	94147	Handle, Wrench, Flexible
3	94161	Wrench, Torque-Limiting, ¾" Sq. Drive
4	94149	Hammer, Ball Pein Machinist's 16 oz.
5	94148	Hammer, Ball Pein Machinist 8 oz.
6	94188	Hammer, Soft Face, w/ Plastic Tips
7	94187	Screwdriver, Hand, Flat Blade, Mechanics
8	62602	Wrench, Combination
9	94181	Pliers, Retaining Ring, External
10	91414	Vise, Tool, Steel
11	62591	Vise, Junior, Swivel, Reinforced
12	62704	Handle, Retaining, Cleaning Rod, 5.56 Mm
13	62704	Rod Section, Cleaning, 5.56 MM
14	62704	Brush Holder Section, Cleaning Rod 5.56 MM
15	62572	Depressor, Front Sight Detent
16	62572	Prepunch, Pivot Pin Detent
17	94158	Socket, Wrench, Hex Bit, ¾ Short Dr
18	94144	Brush, Cleaning, Rod 5.56 MM
19	94144	Brush, Chamber, Cleaning
20	62602	Setter, Punch, Pin, Pliers
21	62601	Setter, Punch, (.125 Dia. Pin)
22	62602	Setter, Punch, (.094 Dia. Pin)
23	62603	Setter, Punch, (.078 Dia. Pin)
24	94160	Wrench, Hex Socket, Spanner (Key, Socket Screw)
25	62604	Tool, Pivot Pin Detent Installation
26	62605	Wrench, Front Sight Adjusting
27	94164	Punch, Pin, Drive, (1/16 dia.)
28	62606	Punch, Pin, Drive, (.073 dia.)
29	94165	Punch, Pin, Drive, (1/16 dia.)
30	62607	Punch, Pin, Bolt Catch Post
31	89679	Gage, Firing Pin Protrusion
32	62603	Tool, Alignment, Barrel Nut
33	T 77001	Gage, Headspace (Field) (Colt)
34	62604	Tool, Reflector, Chamber
35	62602	Punch, Pin, Starter, Taper Pin
36	62603	Punch, Pin, Spec. Insertion
37	94146	Punch, Center
38	94156	Punch, Pin, Drive, (1/8 dia.)
39	94155	Punch, Pin, Drive, (1/4 dia.)
40	92716	Tool, Swaging, Rivet
